

Hydraulic Compression Force Transducer Ultra Compact - Version

Forces from 100 N up to 36 kN

F1101 – ND 6

F1102 – ND 6

Description

Ultra compact hydraulic compression force transducer for applications with small mounting space to measure and display force in an easy way.

The force measurement utilizes the hydraulic principle: The force applied to a piston generates a hydraulic pressure, which is displayed with an indicating device. The scale of the indicating device can show various units e.g. N, kN, kg, t.

The very small dimension of the Ultra Compact-Version enables the installation also in applications with small mounting space. Therewith it is possible to use the advantages of hydraulic force measurement also in special applications.

Applications for the hydraulic force transducers can be found in apparatus engineering, mining, test and measurement equipment and special mechanical engineering.

The Leakproofness Guarantee is prolonged to five years*. In the unlikely event of a leakage the transducers will be repaired free of charge. Therewith we underline the quality of our products and the trust in our technology.
