## Handling and operation

## Note

- Include straight calming section of 5 x DN in inlet and outlet.
- If the media are dirty, install a filter (use magnetic filter for ferritic components).
- It must be ensured that the values given for voltage, current, and power are not exceeded.
- When switch on, a load must be connected in series.
- The electrical details apply to ohmic loads.
  Capacitive, inductive and lamp loads must be operated using a protective circuit.

#### **Adjustment**

The setting of the switching points to 1 l/min is carried out in the factory.
